

Heikki Siikavirta

Heikki Siikavirta - Logical ability

Alva's logic test assesses logical ability, i.e., how efficiently one processes complex information and draws accurate conclusions from it.

Above average

93rd - 98th percentile.

* The most common standard scores are 5 and 6. The percentile ranges for these scores are wide due to the fact that they cover a large proportion of the population.

Logic test results distribution

The difficulty of each task is dependent on the tasks that you answer correctly. This graph shows the difficulty of all the tasks that you have responded to, with green indicating correct answers and red incorrect ones. The test tries to find your highest potential logical ability, meaning that you should see more correct answer below your final score, and more incorrect above it.
